

# Range of colours

150 mm Standard units are Safety Yellow (with optional Red / White reflective striping). 190 mm Standard units are Black with yellow reflective striping

Available in almost any colour include stone look (ask for a colour chart) and can be polished for high shine. Moulded dome cap

## 150 x 1200 H

Bollards can be installed directly inground or installed using the Impact Recovery System

**\$150.00**

## 150 x 1500 H

Bollards can be installed directly inground or secured using the IRS

**\$180.00**

## 150 x 1800 H

Bollards are installed directly inground and will withstand light impact

**\$200.00**

## 190 BOLLARD COVERS

1250/1500H Bollard covers to fit 165 mm Steel Bollards making them safer and extending their life

**\$200.00 / \$225.00**

## Advanced Polymer Bollard

- Lengths available for 150 mm Ø Bollards 1250/1500/1800L
- Lengths available for 190 mm Ø Covers 1250/1500L
- Std units Safety yellow
- Impact Resistant
- UV Resistant
- Won't scratch- same colour throughout
- Wont damage vehicles
- Can be concrete or sand filled
- Can be made other colours (Min 10)
- Reflective striping available (Red 300/white 10)
- Smooth Finish with dome cap
- Bollards can be secured on UZERO WASTE Foundations using the Impact Recovery System to make bollards impact resistant, removable and reusable even following severe impact – See over

### REFLECTIVE STRIPING

Quality prismatic striping \$25.00

# Make Impact resistant

Unless you incorporate some form of shock absorbing capability, the bollard and footing will need replacing every time it is badly impacted.

**Put an end to costly maintenance for the entire lifespan of a development**

## IMPACT RECOVERY

150 MM Poly Bollards can be secured using the ZERO Impact Recovery System making bollards and footings impact resistant & reusable

## S/MOUNT IRS

Suitable for solid concrete footpaths and foundations. Secured using five evenly spaced concrete anchors. Base is reusable

**\$350.00**

## 350/650 DEPTH IRS

We recommend 350 mm Depth footings for most applications. 650 for free standing footings or bollards subject to severe impact

**\$250/\$300.00**

### Upon Low Impact

Bollards remain rigid and appear to be solid inground bollards but when impacted by a vehicle they absorb the impact force deflecting a maximum of 20 degrees and self-recovering, with no diminished capacity following hundreds of impacts

### Severe Impact

When severely impacted instead of the entire footing being dislodged, the inner resistance core bends allowing the bollard to fold but not be dislodged- preventing any further forward movement of the vehicle and enabling fast reinstatement

### Fast efficient replacements

Replacements are simple Following severe impact bollard is easily removed (resistance core replaced) and reinstated in less than 5 mins Bollards and ZerO Rings are re-usable impact after impact, year after year
